

MOBILE / PORTRAIT EDITION

The NeverBeen experience, from your phone.

A screen-first product guide to the travel-photo studio, all Community features and the protected Admin Console operations suite.

COMMUNITY

ADMIN CONSOLE

PUBLIC PAGES

REVIEWED 30 SEP 2026

A travel studio that grows into a social platform

NeverBeen begins with imagined travel photography and expands into destination guides, community participation, direct support, legal controls and guarded operations. This portrait edition preserves the full overview in phone-friendly reading blocks.

STUDIO

Inspire, choose, request

The Home page, audience stories, packages, gallery proof and contact brief lead a visitor toward a custom vacation-photo collection.

GUIDES

Turn a dream into local context

33 reusable destination guides combine editorial recommendations, maps, seasonality and live context.

COMMUNITY

Connect around travel stories

OAuth, registration, profile tools, galleries, relationships, conversations, settings and support create an ongoing member experience.

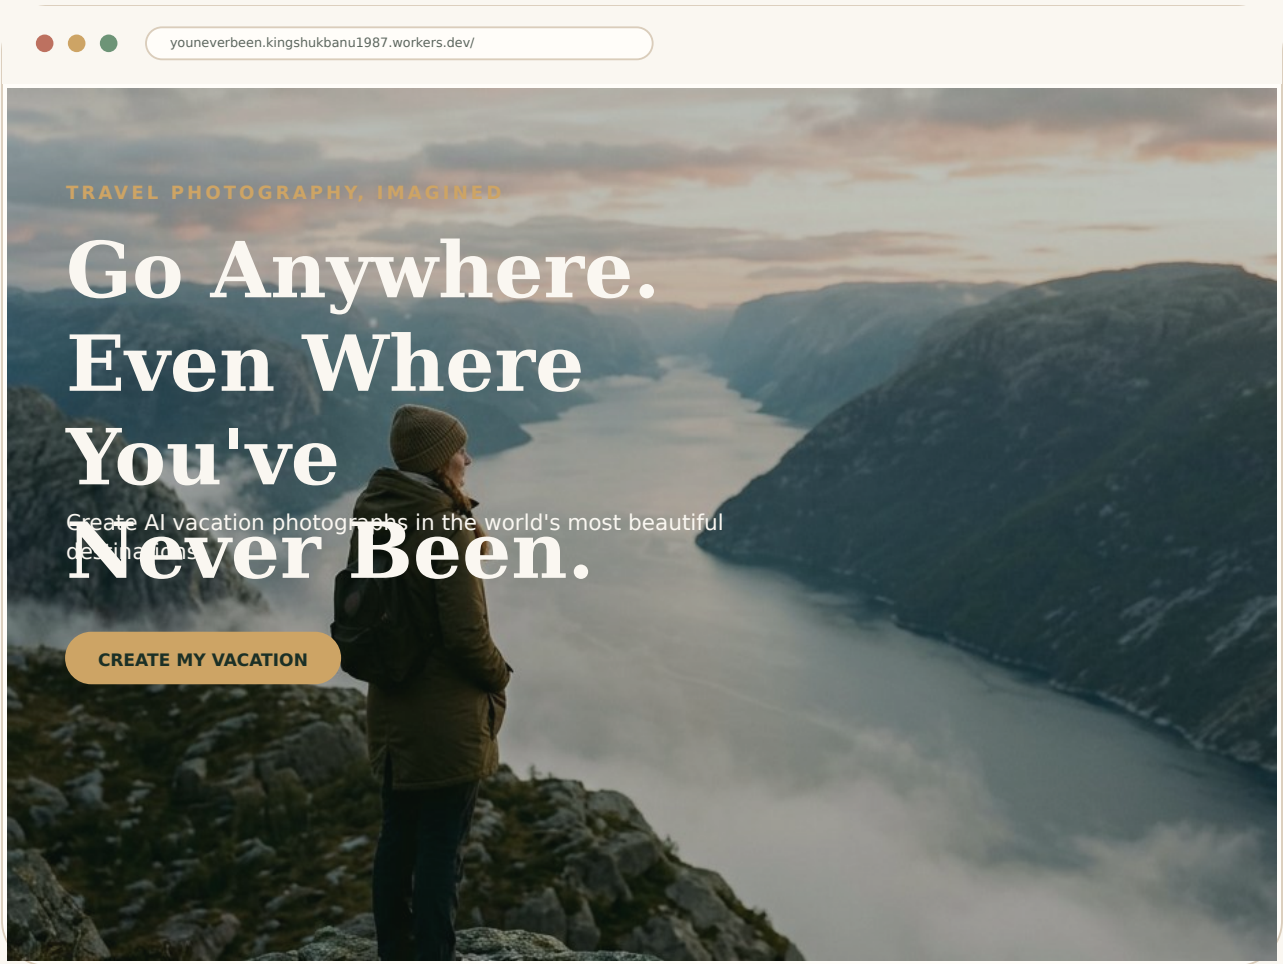

OPERATIONS

Run the experience safely

A protected Admin Console brings together moderation, identity checks, communications, user management, data governance, website management and health.

One scroll from imagination to a studio brief

The public Home page uses a rotating destination visual, an editorial promise and seven primary actions. The new Documentation action follows Explore Gallery and shares its ghost-button treatment.

- Hero & rotating destination
- How It Works
- 33 destination cards
- Gallery & 4 package tiers
- FAQ, founder & contact form
- Explore Gallery
- Documentation Centre

Four stages, four packages, one tailored brief

The studio flow makes the commission understandable before any customer submits a portrait. Selectable pricing flows into the Home contact form so the team receives both the desired destination and creative notes.

01

Request
Choose a destination and package, then describe the intended moment.

02

Verify
Share photos and identification so the team can confirm the request.

03

Compose
AI places the traveller in the selected light / wardrobe / atmosphere; an editor refines the image.

04

Deliver
Receive print-ready files for sharing, albums and framing.

PACKAGE LADDER

Starter ₹499 · Economy ₹999 · Business ₹1999 · First ₹4999

Package tiers range from 3 looks to 100 looks, increasing the editorial speed, sharing, wardrobe, creative-direction and commercial-license options. The request form collects name, contact, package, destination and a creative note.

33 reusable long-form guide pages

Destination cards open a deeper route rather than a static tile. The guide template creates a planning-layer around each backdrop: current conditions, place knowledge, map context, seasonal advice and a return route to the studio.

01

Live cards

Weather, local clock, currency and cross-rates with loading / fallback states.

02

Place story

Overview, food, attractions, history, geography and culture.

03

Planning

Best time, seasons, transport, practical facts and “Did you know?” notes.

04

Explore

Map, coordinates, Google outbound actions, photographs, related places and request CTA.

Data sources named on the guide include Open-Meteo (weather), Frankfurter / ECB reference rates, Wikipedia extracts and Google Maps / image search links.

Audience, Collection and Founder pages make the brand human

These public routes connect the service promise to a concrete audience, visual proof and a named creator. Every founder portrait in this document is fitted in full — never cropped.

AUDIENCE

Seven moments + six promises

Couples, families, birthday gifts, social sharing, dream trips, content creators and older travellers sit alongside written permission / privacy commitments.

COLLECTION + FOUNDER

61 photos + Kingshuk's profile

The Collection opens a labelled lightbox gallery. The Founder page names Kingshuk, a Senior Software Engineer, and details biography plus nine technical-expertise domains.

Pages that keep users informed after the first visit

NeverBeen provides direct feedback, self-service help, privacy and terms content, plus a travel-feeds interface designed to discover destination context beyond the studio catalogue.

TRAVEL FEEDS

Search, source status, trends and trip modals

Destination search can show article categories, Commons imagery, weather / trend context, source reporting and a 30-second rotating board. Flight and hotel interfaces demonstrate a Skyscanner-style search flow.

FEEDBACK

A direct studio WhatsApp hand-off

Required name, email, type and notes create a prefilled WhatsApp message. The page offers popup fallback, character-count feedback and alternate support links.

HELP CENTRE

14 searchable answers across six topics

Getting started; account & sign-in; community; memoirs & galleries; privacy & safety; and language / translation each have filterable accordion articles.

PRIVACY + TERMS

Human-readable rights and responsibilities

Privacy covers collection, use, photos, cookies, sharing, member rights, security and contact. Terms cover acceptance, account, conduct, content, billing, rights, termination, disclaimers and law.

Connect, browse as a guest, then become a member

The Community root is a compact entry page. It introduces OAuth-style connection, language choices, screen-aware community navigation and a guest route for people who want to look around first.

NEVERBEEN COMMUNITY

Connect with travellers

A provider-based connection can route a complete member to Profile or a new member to Registration.

Continue with Google

GUEST EXPLORER

ENTRY FEATURES

Language, security and cross-links

The card can present a multilingual selection, provider loading / help states, a secure-authentication note, guest exploration and direct Privacy, Terms, Help and Home links.

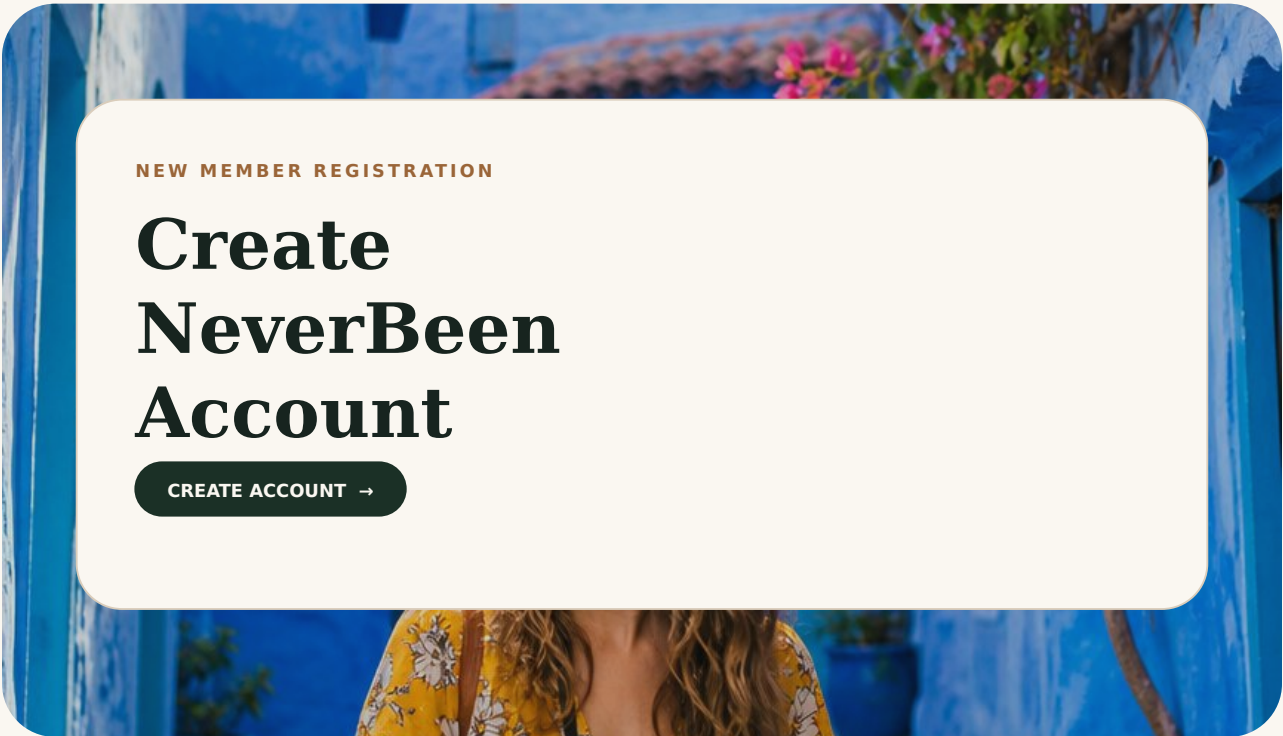

OAuth CALLBACK

A purposeful transitional screen

The callback validates the provider response, exchanges credentials with the application and redirects to Profile or Registration; an error state returns the user to Connect.

Required identity and location details in one responsive card

The registration route uses device-specific travel-scene art and clear inline validation. It turns an account connection into a complete traveller profile.

FORM CONTENT

Photo, name, email, location, identity

A profile portrait is required (JPEG / PNG / JPG with a presented 200 KB limit). The form requests name, surname, email, country → state → city, gender and date of birth.

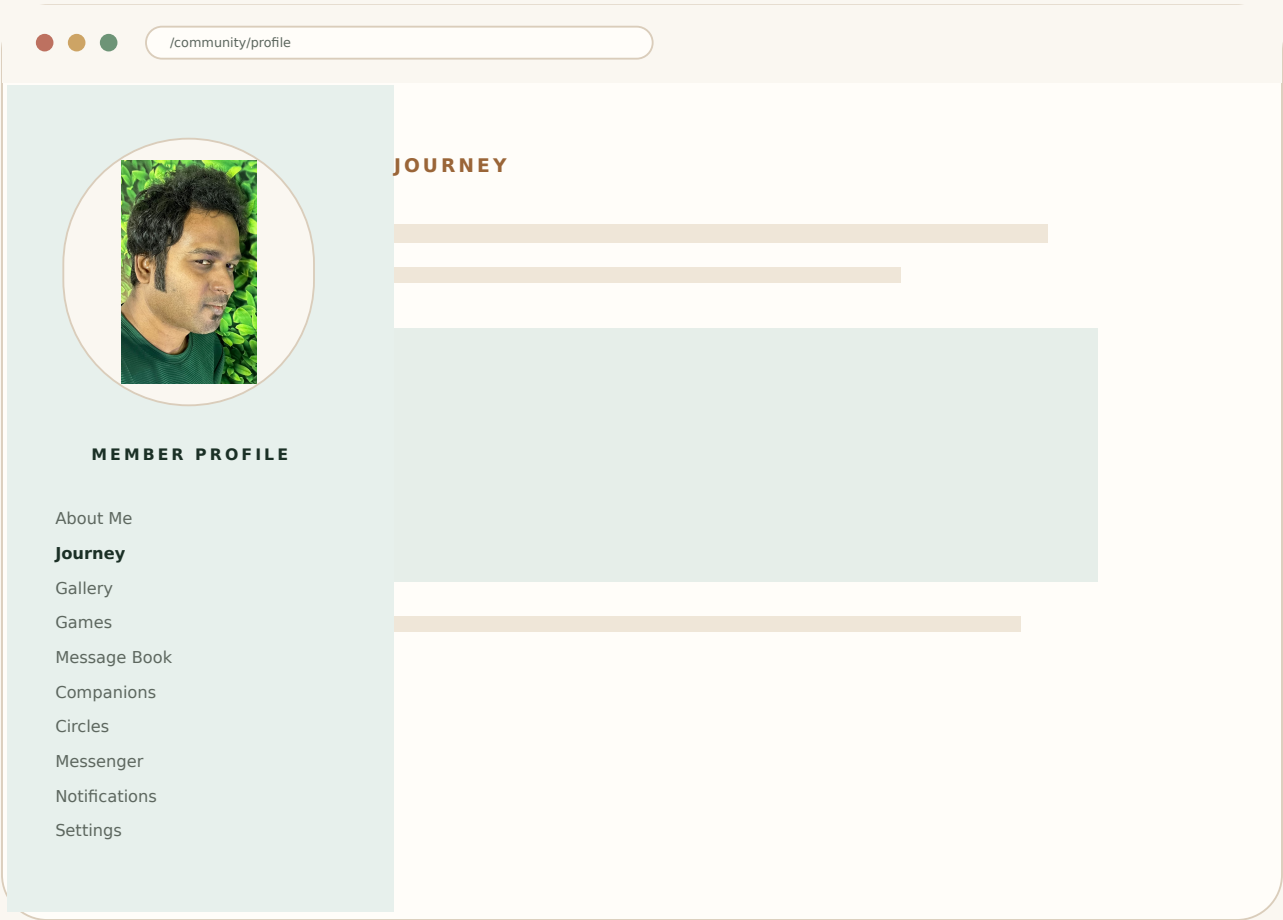

FORM BEHAVIOUR

Cascades, validation and private-first handling

Dependent geography dropdowns guide the visitor in order. Invalid fields display specific messages; submission exposes a creating state. The page labels the community as free, verified and photo-private until approval.

A responsive member command centre

The profile pairs a left identity / navigation system with a broad work area. On phones the same navigation becomes a drawer so the current section stays usable in a vertical layout.

IDENTITY + NAVIGATION

Avatar, cover, status and social shortcuts

The side panel supports avatar / cover changes, active presence, companions, circles, Journey posts, followers / following counts, profile lock status and an explicit visitor preview.

SEARCH + RESPONSIVENESS

Find travellers, companions and Circles

Search can return people and groups. The desktop surface retains a top search and wide panel; phone layouts move the nav into a mobile drawer while preserving a branded top bar and avatar action.

Build a travel identity rather than a static account

Core content tools let a member tell stories, organise imagery and shape the amount of detail shown to other people.

JOURNEY

Compose a post with media, hashtags and audience

The Journey composer supports text, #hashtags, images, videos, reactions, replies, edit / share actions and audience controls. Clicking a hashtag opens the visible related-post feed.

ABOUT ME

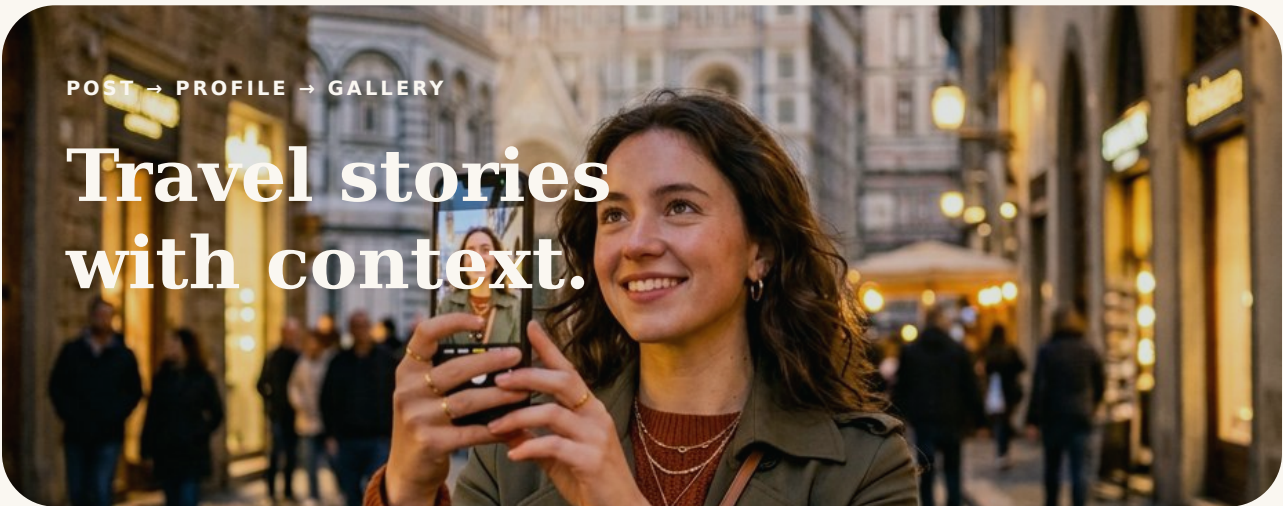

Eight detailed profile sub-sections

Intro & Travel Story; Personal Details; Work Experience; Education; Hobbies; Interests; Contact Info; and About the Person create a deeply editable member portrait.

VACATION GALLERY

Albums with explicit visibility

Members can create and enter albums, upload / arrange photos, add captions and choose Public, Companions or Only me. The gallery is also represented in visitor profile views when permitted.

Shared conversation, private chat and group belonging

NeverBeen layers community interactions so discovery can start in a public stream and continue among trusted companions and Circles.

MESSAGE BOOK

A shared guestbook for travel discussion

Guests can read the global stream. Authenticated users can submit a 2,000-character post, reply in a nested thread, like / dislike and manage their own eligible entries.

COMPANIONS

Requests, pending states, suggestions and mutuals

The Companions area groups incoming / sent requests, established companions and suggestions. Cards expose verification, profile preview, location / profession context and relationship actions.

CIRCLES

Small travel communities with management actions

Create a Circle, add people, manage membership and settings, open Circle chat or save a chat as a Circle. A compact Circle panel lives under the profile navigation.

MESSENGER

Pending, online and offline companion threads

Messenger separates conversation states, exposes presence and supports personal / group communication. Header icons surface unread notification and chat cues.

Stay social, stay in control

Beyond travel content, the dashboard combines light play, presence, reminders and self-service controls so members can make the space their own.

Games

NeverBeen Play includes photo-puzzle selections, Ludo with 2-4 players / AI difficulty, and local browser Stockfish chess with side, strength, hints, undo and restart.

Birthdays

Upcoming celebration view plus a separate belated-birthdays period helps companions keep in touch.

Notifications

Dedicated notifications surface activity and announcement notices; badge counts also travel to the community header.

Settings

Device list, privacy / profile lock, travel styles & matchmaking, notification channels and blocked users are all visible as settings cards.

Storage

A percentage view and micro inspector identify gallery photos / albums that consume storage and offer cleanup actions.

Themes & language

Community themes and a remembered language selection personalise the experience; translation falls back safely when a service is unavailable.

Privacy decisions are reflected in the interface

The Community feature set does not assume every profile is public. It visibly supports profile locks, audience selection, reports, blocks, visitor previews and data controls.

PROFILE GATES

Public, locked and companions-only contexts

Profile state can visibly signal a locked account. Visitor screens preserve identity, About information, Gallery and Journey structure only when the viewer has the required relationship.

REPORTING + MODERATION

Report abuse from people and content

Community and Message Book interactions include report pathways; the accompanying Help Centre explains reporting and the Admin Console supplies the triage destination.

DATA AWARENESS

Privacy Policy and account control support

Public privacy content explains export, correction, erasure and deactivation. Member Settings / Storage offer in-product routes to manage the information and media behind a profile.

Protected access before operations

The ``/login`` route is an Admin Console sign-in screen rather than a consumer account page. Admin-only routes are guarded and redirect unauthenticated navigation to this entry point.

NEVERBEEN ADMINISTRATION

Admin Console

Restricted access for members, galleries, website content and community operations.

Admin Username

Password

SIGN IN TO ADMIN CONSOLE

VOLUNTEER ADMIN

A separate application journey

The alternate entry requires full name, email, strong password and resume attachment. A success state confirms review rather than granting instant operational access.

Live operations, safety queues and shared context

After authentication, a fixed side panel and routed work area bring the current operational state into one desktop-oriented console.

Dashboard

Member stats, 7-day activity, highlighted Journey posts and reports awaiting review.

Members

All, verified and online drill-downs; safety-oriented actions from membership contexts.

Abuse reports

Triage / decision space for reports against content or members.

Identity checks

Verification queue and a secure full-page document viewer.

Live presence

Visible online members, signed-in administrators, status pills and direct admin-mail actions.

Coordinate the team and keep the site current

The Admin Console contains private staff communication, audience-facing publishing and a content-management layer for the visitor website.

ADMIN MAIL

Inbox, sent and compose

Administrators communicate inside a private Mail workspace. The side panel exposes unread counts, unsent-draft state and an admin directory for recipients.

ANNOUNCEMENTS

Target and measure a notice

Administrators create announcements, inspect history and see recipient / delivered / opened / clicked metrics along with reach by region, country, gender and age.

WHATSAPP

Docked WhatsApp Web workspace

The console opens WhatsApp Web after QR sign-in and includes guidance for starting a chat plus privacy / security handling.

WEBSITE MANAGEMENT

Draft, preview, publish and roll back

A small CMS edits Home, Community and global components. Drafts can be previewed in a frame, published with a note, reverted by revision, imported / exported, reset and monitored through pending-change counters.

Manage accounts and steward information responsibly

Dedicated tabs turn member safety, operational data and legal requests into visible work instead of passive records.

USER MANAGEMENT

Directory, roles, sessions and audit

Tabs cover Directory, Roles & permissions, Sessions & security and Audit log. Summary statistics expose total users, new registrations, active users, verification, 2FA and restricted / disabled state.

DATA MANAGEMENT

Seven stewardship surfaces

Catalog, Explorer, Privacy requests, Retention, Data quality, Backup & restore and Access log are supported by data summaries for datasets, records, storage, open requests, health score and last backup.

PRIVACY, RETENTION & BACKUP

A practical line from policy to operations

Privacy request queues, retention workflow, data-quality checks and backup / restore controls help the team act on the promises the public Privacy Policy makes.

ACCESS LOG

Operational accountability

The Access log is a dedicated data-management area for reviewing information access and related activity in the governance suite.

See system conditions, plan downtime and report back

The final operations group helps staff protect performance and make a controlled change visible before it affects visitors.

WEBSITE HEALTH

Traffic, engagement, storage and performance

Charts cover traffic, visitor timing / origin / countries, Community activity, engagement funnel, retention cohorts, storage over time, storage by dataset, page-load time, slow pages, JavaScript errors and resource mix.

SITE DOWNTIME

Window → visitor message → preview → apply

Maintenance setup includes a downtime window, visitor-facing message, live preview, site-wide apply action, notify-me sign-ups and an operations log. Shell status signals live, scheduled or down state.

HEALTH REPORT + REPOSITORIES

Printable evidence and future integration

A guarded Health Report opens as a print-ready document. Repositories is present as a connected-repository / integration surface and is currently marked under development.

RETURN BOUNDARY

Clear separation from the public site

The console carries the administrator identity, log-out action and Back to Website route — operational work is purposefully distinct from public browsing.

Core public routes

A compact map of the public destination, request, support and community routes covered in this mobile document.

/	Home — studio sections and request path
/audience	Audience use cases and written promises
/collection	61-photo lightbox collection
/founder	Founder biography and expertise
/destinations/:slug	33 individual guide pages
/travel-feeds	Search, trends and trip forms
/feedback	WhatsApp-prepared support form
/help	Searchable Help Centre
/privacy	Privacy Policy and rights
/terms	Terms & Condition
/documentation	Responsive PDF Documentation Centre

Member transitions and protected administration

Community pages are available as direct routes; the Admin Console is protected by an authentication guard and sends anonymous visitors to the Admin entry screen.

/community	Community Connect
/community/register	Required new-member registration
/community/profile	Member social dashboard
/profile	Direct profile alias
/community/message-book	Shared discussion stream
/community/messages	Redirects to Message Book
/community/callback	OAuth exchange / redirect state
/login	Admin entry + volunteer application
/admin	Protected Admin Console
/admin/health-report	Protected print-ready health report

AUTHENTICATION BOUNDARY

Protected routes stay protected

The route guard checks administrative authentication before loading `/admin`` and its child modules. This documentation describes capabilities but never accesses member records or credentials.

Europe, Africa & Middle East

Every supported destination has the reusable long-form guide described earlier. These 17 routes are the first half of the full catalogue.

EUROPE • 12

Paris • Switzerland • Norway • Santorini • Rome • London • Reykjavik
• Istanbul • Netherlands • Austria • Denmark • Finland

Routes use the corresponding lowercase slug under `/destinations/``.

AFRICA + MIDDLE EAST • 5

Marrakech • Cape Town • Egypt • Serengeti • Dubai

These guide entries carry their own region, time, currency and planning context.

Asia Pacific & Americas

The remaining 16 routes complete the 33-destination catalogue. City, country and regional concepts all use the same planning / live-information template.

Tokyo	Seoul
New Zealand	Machu Picchu
Antarctica	Canada
United States	Maldives
Thailand	Malaysia
Singapore	Indonesia
Australia	Japan
Korea	Brazil

CATALOGUE NOTE

33 routes connect back to the studio

Guide pages always close the loop with related places and a direct request CTA: the destination can be researched deeply, then turned into a NeverBeen collection brief.

MOBILE DOCUMENTATION

Dream destinations. Real community. Clear operations.

This portrait guide documents the end-to-end NeverBeen experience: public inspiration, destination knowledge, member participation, privacy-minded controls and a protected operations suite.
